PROJECTS

Drowsiness Alert System

It's my ongoing final year project on image processing and machine learning using openCV. It's a system where the drowsiness state of the person is monitored and if the person is in drowsy state then an alarm will beep.

Inventory Management App

It's an android application built to manage inventory of a seeds company. Where every product is managed by its unique barcode. Management of products includes products sold, products ordered, transaction details and adding products to the inventory.

Business website

It's a website built on WordPress for a startup company which helped them to grow and reach maximum customers.
